About Me

DevOps Engineer with 4+ years of experience in platform and software automation: Go tooling, Kubernetes, and cloud infrastructure. Passionate about system design and building reliable, observable systems. Have a soft spot for distributed systems.

Skills

AI Agents agentic workflows, tool harnesses, sandboxed environments
Infrastructure Kubernetes (RKE2, Rancher, Helm), Docker, VMware vSphere
IaC Terraform, Ansible
CI/CD & GitOps GitHub Actions, GitLab Pipelines, Jenkins Pipelines, ArgoCD
Cloud AWS
Security NeuVector
Observability Prometheus, Grafana, Loki, Mimir
Programming Python, Go, Bash/Shell

Professional Experience

Zucchetti **Jun 2024 — Present**
DevOps Engineer

- Manage our internal infrastructure, provisioning machines and deploying services:
  - Machine and service provisioning through Terraform modules
  - CI/CD pipelines on self-hosted Jenkins for service deployment
  - GitHub Actions workflows to build and publish container images
- Design and implement sandboxed environments and tool harnesses for agentic workflows
  - Integrating agentic capabilities in our product, simplifying query & data retrieval for our customers
  - Automated documentation of our product's entire codebase, improving the development teams productivity
- Designed the architecture and led the migration of the customer-facing PostgreSQL database from a single instance to a container-per-database model:
  - Built a custom PostgreSQL image integrating pgBackRest for scheduled backups to S3-compatible object storage
  - Developed a middleware service in Go for the development teams to create, delete, and query customer databases through API
  - Defined compute and storage allocations for subscription plans, providing each customer with a minimum allocation of dedicated resources

Key Partner **Jul 2022 — Jun 2024**
DevOps Engineer

- Designed and built a production-ready Kubernetes platform using RKE2 and Rancher for the ELT Group (Italian defense sector), addressing the project's security and compliance requirements
  - Integrated NeuVector into the platform and the CI/CD pipelines for container vulnerability scanning and admission control
  - Planned and performed Kubernetes major-version upgrades while maintaining service availability, and automated service provisioning with Helm charts
  - Worked with development teams to design GitLab CI/CD pipelines covering builds, testing, and deployment through GitOps workflows, integrating SAST/DAST services
- Designed and delivered a hands-on cloud and containers workshop for Italian public sector institutions, including Camera dei Deputati and COR
  - Built the workshop environment on AWS, provisioning a dedicated EC2 instance, with Kubernetes configured, for each participant
  - Managed the AWS environment with Terraform, including EC2, IAM, VPC networking, security groups, and SSH key pairs

Education

Sapienza University of Rome | Computer Science **2020 — 2022**
Master's Degree in Computer Science | Grade 103/110

I specialized in Networks and Security, and attended optional courses in distributed systems and UI/UX development. I wrote my thesis while working at Key Partner, designing and implementing a Kubernetes platform supporting the full SDLC: CI/CD workflows and security checks across the pipeline and the platform itself, plus observability, monitoring, and distributed storage capabilities.

Sapienza University of Rome | Informatica **2016 — 2020**
Bachelor's Degree in Computer Science

Besides the mandatory courses, I attended optional courses in systems architecture and introduction to information security, plus a six-month internship at Poste Italiane, maintaining and improving an internal document ingestion system.

Hobbies and Interests

- **Photography**: Mainly street and nature photography
- **Tabletop gaming**: Weekly sessions, including D&D campaigns
- **Literature**: last read *The Three-Body Problem*, now reading *The Hyperion Cantos*
